

C-STEM — Kit Catalogue

Generated 20 May 2026, 17:56 · 159 kits

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
1	Sources of Light	DESIGN A TORCH LIGHT	Explorer	Physics	4	0	active	This module teaches participants about LEDs—how they work and their types (SMD, COB). They'll explore light's straight-line travel, discover LED applications (lights, screens), and engage in a DIY LED activity. An assignment evaluates their grasp of key concepts.	
1	Sources of Light	MAGIC SABER GREETING	Discoverer	Physics	4	0	active		
2	Magnetic Levitation	HOVERING MAGNETS	Explorer	Physics	4	0	active	This STEM project demonstrates magnetic levitation using repelling forces to counteract gravity. It explores principles of magnetism, equilibrium, and force interactions, connecting to real-world applications like maglev trains. A hands-on way to engage with physics, engineering, and technology concepts!	
2	Magnetic Levitation	MAGNETIC SPIDER	Discoverer	Physics	4	0	active	This hands-on project demonstrates magnetic repulsion by constructing a levitating pencil that balances on a ring of magnets. Participants explore polarity alignment and equilibrium forces while observing how like poles repel to create stable suspension. Assignments evaluate comprehension of magnetic fields and their practical applications in technology.	
3	Science of Vibration	BUZZING SCORPION	Explorer	Physics	8	0	active	It defines what vibrations are and how they create sound. We investigate how vibrations travel through different materials and examine their various applications in everyday life and science. This inquiry-based approach helps understand this essential form of energy and motion.	
3	Science of Vibration	MAGICAL BOLT	Discoverer	Physics	8	0	active	This course introduces the effect of force on objects, defining force as a vector quantity. Participants will learn about balanced, unbalanced, and resultant forces. The project also covers vibration motors through a DIY activity: building a magic screw. Understanding will be evaluated	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								through assignments, reinforcing concepts of force and motion.	
4	Colorful Vision	MAGIC SLIDER AND SECRET TOPS	Explorer	Human Body	2	0	active		
4	Colorful Vision	SPY MASK, AGAMOGRAPH	Discoverer	Human Body	2	0	active		
5	Rules of Reflection	INFINITY WELL	Explorer	Physics	7	0	active	The Infinity Well project demonstrates light reflection through an engaging visual illusion of infinite depth. Using two mirrors—one fully reflective and one partially reflective—and strategically placed LEDs, the model creates the appearance of an endless tunnel as light bounces repeatedly between the surfaces. This hands-on experiment teaches principles of light propagation, reflection, and diminishing intensity while showcasing practical applications in art and design. A creative way to explore optics, the project bridges scientific concepts with striking visual phenomena.	
5	Rules of Reflection	MAGIC BANK	Discoverer	Physics	7	0	active	The Money Doubling Box and Magic Bank projects teach light reflection through hands-on mirror experiments. Participants build these optical illusion devices to observe how plane mirrors create virtual images and multiply objects visually. The activity demonstrates reflection principles while developing STEM skills, with assignments evaluating understanding of light behavior and mirror properties.	
6	Rocket Science	ROCKET LAUNCHER	Explorer	Astronomy Space Science	3	0	active	This STEM activity demonstrates rocket science using a DIY mini missile launcher powered by compressed air. Participants explore Newton's Third Law, seeing how air pressure propels the missile forward, showcasing thrust, force, and motion in an exciting hands-on experiment.	
6	Rocket Science	BLOW ROCKET	Discoverer	Astronomy Space Science	3	0	active	This project explores air properties and energy conversion through rocket design challenges. Participants build straw launchers to test aerodynamics, pressure-thrust relationships, and shape optimization. Hands-on experiments demonstrate wind energy applications while teaching gas	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								behavior and Newtonian principles. Design iterations and assignments reinforce understanding of air's role in propulsion and natural phenomena.	
7	Persistence of Vision	BOW THAUMATROPE DISC THAUMATROPE 3D TROPE	Explorer	Human Body	5	0	active	The thaumatrope demonstrates how the brain retains an image momentarily, allowing it to merge with the next and create the illusion of continuous motion. This principle underpins the mechanics of animation and film, where individual frames, displayed in rapid succession, appear to move fluidly. Through this interactive activity, participants gain a practical understanding of persistence of vision, reinforcing key scientific concepts in an engaging and experiential manner.	
7	Persistence of Vision	PHENAKISTOSCOPE HANDYTROPES FOLDOTROPE	Discoverer	Human Body	5	0	active	The thaumatrope demonstrates how the brain retains an image momentarily, allowing it to merge with the next and create the illusion of continuous motion. This principle underpins the mechanics of animation and film, where individual frames, displayed in rapid succession, appear to move fluidly. Through this interactive activity, participants gain a practical understanding of persistence of vision, reinforcing key scientific concepts in an engaging and experiential manner.	
8	Magnetic Force	GAUSS GUN	Explorer	Physics	6	0	active	The Gauss Gun project investigates magnetic acceleration through a chain of colliding spheres. Students analyse how neodymium magnets transfer kinetic energy via elastic collisions, measuring velocity changes while exploring momentum conservation and magnetic dipole interactions. This hands-on model demonstrates fundamental electromagnetic concepts with applications in propulsion technology and energy conversion systems.	
8	Magnetic Force	MAGNETIC HOCKEY	Discoverer	Physics	6	0	active	This interactive project explores magnetic forces through hands-on gameplay. Participants experiment with attraction/repulsion principles to control movement, applying physics concepts in action. Teams collaborate to strategize and test magnetic	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								interactions, blending science with play. Post-activity tasks assess understanding of magnetic fields and their real-world applications, making STEM learning engaging and tangible.	
9	Energy and Environment	ENERGY WARRIOR	Explorer	Tech	3	0	active	This workshop explores energy types (kinetic, solar, electrical) and their importance in daily life. Participants will discover why saving energy matters (resource conservation, cost reduction) and learn practical tips (turning off lights, using renewables). An interactive assignment evaluates understanding, empowering attendees to adopt sustainable habits.	
9	Energy and Environment	MAGIC LAMP	Discoverer	Tech	3	0	active	This workshop explores energy types (kinetic, solar, electrical) and their importance in daily life. Participants will discover why saving energy matters (resource conservation, cost reduction) and learn practical tips (turning off lights, using renewables). An interactive assignment evaluates understanding, empowering attendees to adopt sustainable habits.	
10	Sound and Signals	TRIP ALARM/CALLING BELL	Explorer	Physics	9	0	active	This hands-on project teaches sound principles through a DIY calling bell. Participants learn how sound is created and transmitted while constructing a functional bell. The activity demonstrates vibration-to-sound conversion, wave propagation, and circuitry basics. Through building and testing, students grasp acoustic fundamentals, reinforced by practical assignments evaluating their understanding of sound mechanics and electrical components.	
10	Sound and Signals	DESIGN A MORSE CODE	Discoverer	Physics	9	0	active	This project explores circuits and sound through a Morse code buzzer. Participants construct a working device to understand electrical connections, sound generation, and wave transmission. Hands-on Morse code practice demonstrates practical communication applications, while follow-up assignments evaluate comprehension of circuit functionality and sound principles through message-decoding challenges.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
11	Light and its Properties	WHEELOSCOPE AND KALIEDOSCOPE	Explorer	Material Science (Physics)	5	0	active	This module teaches participants about material types and reflection principles using three mirrors. They'll explore applications of kaleidoscopes (art, patterns) and wheeloscopes (dynamic designs), then design their own Wheeloscope and Kaleidoscope. Hands-on activities reinforce optics concepts and creativity.	
11	Light and its Properties	FUN WITH MIRRORS: TRUE MIRROR MAGIC MIRROR MIRROR ART	Discoverer	Material Science (Physics)	5	0	active	This kit explores the fascinating principles of reflections and how they shape our perception of the world around us. By using mirrors and reflective surfaces, it demonstrates the laws of reflection, symmetry, and image formation in an engaging and interactive way. The experiments highlight both practical applications—such as in periscopes and optical devices—and the aesthetic beauty seen in patterns and symmetry. Through hands-on exploration, the kit encourages curiosity about light, geometry, and visual phenomena, bridging science with creativity.	
12	Force and Motion	RUBBER BAND PISTOL	Explorer	Physics	4	0	active	A rubber band pistol is a simple mechanical toy that uses stored elastic energy to launch rubber bands. By stretching and locking the rubber band onto rotating notches or triggers, it demonstrates basic physics concepts like potential and kinetic energy, motion, and force, making it both fun and educational.	
12	Force and Motion	SLIDER GUN	Discoverer	Physics	4	0	active	This hands-on project demonstrates physics principles through a DIY slider gun. Participants build and test the device to study motion dynamics, momentum transfer, and speed measurement. The activity illustrates energy conversion between potential and kinetic forms, while assignments evaluate comprehension of Newtonian mechanics through practical experiments and data analysis.	
13	Magical Shadows	HALLOWEEN SHADOW	Explorer	Physics	6	0	active	Investigating the Properties of Light and Formation of Shadows Light plays a crucial role in how we see the world. This study explores the	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								scientific properties of light and how shadows form. By examining how light travels, interacts with objects, and creates different shadow patterns, we aim to understand its behaviour in everyday life.	
13	Magical Shadows	COLORFUL SHADOWS	Discoverer	Physics	6	0	active	Investigating the Properties of Light and Formation of Shadows Light plays a crucial role in how we see the world. This study explores the scientific properties of light and how shadows form. By examining how light travels, interacts with objects, and creates different shadow patterns, we aim to understand its behavior in everyday life.	
14	Potential and Kinetic Energy	BOOMERANG CAR	Explorer	Physics	3	0	active	This hands-on project demonstrates mechanical energy principles through a rubber band-powered car. Participants explore potential-to-kinetic energy conversion, elastic potential energy storage, and material properties while building and testing their vehicles. Assignments evaluate understanding of energy transformations, friction effects, and elastic limits in moving systems.	
14	Potential and Kinetic Energy	RUBBERBAND CAR	Discoverer	Physics	3	0	active		
15	Human Eye and Moton Picture	DESIGN A ZOETROPE	Explorer	Biology	8	0	active	This hands-on project teaches motion perception through a DIY zoetrope. Participants build and test this classic animation device to discover how persistence of vision creates fluid movement from static images. By experimenting with frame rates and designs, students analyse animation principles while connecting them to modern media. Assignments evaluate understanding of optical illusions and encourage innovative improvements.	
15	Human Eye and Moton Picture	MOTORIZED THAUMATROPE	Discoverer	Biology	8	0	active	This project immerses students in animation principles through hands-on experiments with thaumatropes, zoetropes, and flip books. Participants discover how persistence of vision creates movement illusions while designing custom sequences. The activity bridges art and science,	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								exploring visual perception psychology and physics, with assignments evaluating understanding of animation mechanics and creative application.	
16	Contact and Non-Contact Forces	DESIGN MAGNETIC SWITCH LAMP	Explorer	Physics	9	0	active	This program introduces contact and non-contact forces. Participants will then understand Hall effect sensors: their function, operation, and applications. A hands-on project involves building a magnetic lamp to apply principles. Comprehension is evaluated via assignments, ensuring grasp of magnetic sensing and fundamental force concepts.	
16	Contact and Non-Contact Forces	MAGNETIC SWITCH	Discoverer	Physics	9	0	active	This hands-on project demonstrates electrical circuits through a DIY gravity-controlled switch. Participants build a device that activates/deactivates via orientation changes, learning: Basic circuit completion Switching mechanisms Gravity's role in contact systems The activity combines physics with practical electronics, featuring prototyping challenges and assignments analyzing real-world applications in tilt sensors and safety cut-offs.	
17	Fun with Circuits	TABLE LAMP	Explorer	Physics	6	0	active	This hands-on project teaches electric circuits through building a table lamp. Participants learn to identify components, differentiate conductors/insulators, and understand open/closed circuits. By assembling and testing their lamp, students grasp practical electronics fundamentals. Assignments reinforce key concepts, combining theory with real-world application in an engaging DIY format.	
17	Fun with Circuits	TOGGLE SWITCH	Discoverer	Physics	6	0	active	This hands-on project teaches two-way switching principles for controlling lights from multiple locations. Participants build a functional circuit to understand the internal electronics and switching mechanism. Through construction and testing, learners explore practical wiring applications, reinforced by assignments	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								demonstrating mastery of circuit design and operation.	
18	Effects of Electricity	ELECTROMAGNET	Explorer	Physics	7	0	active	This hands-on project demonstrates electromagnetic principles through a DIY toy. Participants explore electric current effects, solenoid operation, and magnetism by building a working model. The activity highlights real-world electromagnet applications while reinforcing core physics concepts. Assignments evaluate understanding of electromagnetic interactions and their practical uses in everyday devices.	
18	Effects of Electricity	DC MOTOR	Discoverer	Physics	7	0	active	This project demonstrates how electricity and magnetism interact to create motion. Students discover how moving electrons generate force by building a simple electromagnetic device, linking the experiment to real-world electric motors. Through hands-on construction and troubleshooting, they explore practical applications of electromagnetism, with assignments reinforcing key physics principles and problem-solving skills.	
19	Be an Ornithologist	BALANCING BIRD	Explorer	Biology	3	0	active		
19	Be an Ornithologist	BIRD GAME	Discoverer	Biology	3	0	active	This interactive game teaches bird adaptations through engaging trivia and strategy. Players discover fascinating avian traits, compare species' abilities, and test their knowledge by matching birds to their unique skills. The activity combines biology with critical thinking, culminating in reflective assignments that reinforce learning about nature's most remarkable flyers, swimmers, and survival specialists.	
20	Skeletal and Muscular System	HELPING HANDS	Explorer	Human Body	5	0	active	This hands-on project bridges biology and engineering as students construct a functional arm model. Participants study bone-muscle interactions, apply mechanical principles to replicate movement, and optimize grasping mechanics through iterative testing. The activity develops STEM skills while deepening anatomical understanding, with assessments evaluating design thinking and biomechanical analysis.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
20	Skeletal and Muscular System	GHOST UNCLE FLIP BOOK	Discoverer	Human Body	5	0	active	This hands-on project teaches human anatomy through building a "Ghost Uncle" model. Participants discover bone functions, muscle-joint interactions, and skeletal growth while constructing their movable figure. The activity makes biology tangible, with assignments evaluating understanding of structural support, movement mechanics, and bone development processes.	
21	Food Inspector	FOOD TEST KIT ADULTERATION TEST	Explorer	Biology	6	0	active	The KWL approach facilitates understanding by first identifying existing knowledge about food safety and common food components (starch, sugars, fat). It then structures inquiry into specific methods used by inspectors, focusing on how chemical tests reveal the presence of starch using iodine, reducing sugars with Benedict's solution, and fats using paper tests. The exploration highlights the significance of these tests in verifying nutritional information, detecting adulteration, ensuring quality control, and ultimately safeguarding public health.	
21	Food Inspector	BALANCED FOOD CARD GAME	Discoverer	Biology	6	0	active	This interactive card game teaches nutrition fundamentals through strategic meal-building. Players identify essential nutrients, select food sources, and create balanced diets while competing. The hands-on activity reinforces dietary knowledge and critical thinking, with assignments assessing comprehension of nutrient roles and healthy eating principles.	
22	Fun with Photosynthesis	EXPLORE CHLOROPHYL: CHROMATOGRAPHY & FLUORESCENCE DESIGN UV LAMP	Explorer	Biology	7	0	active	This hands-on module explores photosynthesis, fluorescence, and capillary action through chromatography experiments. Students investigate plant pigments, analyze light energy conversion, and apply concepts through creative projects. Assessments evaluate comprehension of biological processes and their practical applications in botany and environmental science.	
22	Fun with Photosynthesis	CYANOTYPE PHOTOGRAPHY	Discoverer	Biology	7	0	active	This hands-on module unveils the science of cyanotype photography,	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
		DEVELOPMENT						where participants explore light-sensitive iron compounds and UV-driven reactions. Through DIY printing experiments, students create blueprints using sunlight, learning photochemical principles. Assessments evaluate comprehension of redox reactions and light energy conversion in this blend of art and chemistry.	
23	Health and Hygiene	PERFUME MAKING	Explorer	Chemistry	3	0	active	This module teaches daily cleanliness habits and their health impacts through interactive learning. Students explore hygiene routines, analyze consequences of poor practices, and craft natural perfumes to understand personal care. The unit combines practical skills with science, emphasizing disease prevention and social well-being through hands-on activities and reflection tasks.	
23	Health and Hygiene	PEDICURE BOMB	Discoverer	Chemistry	3	0	active	This hands-on activity explores acid-base reactions through DIY pedicure bombs. Students observe citric acid and baking soda fizzing in water while learning about coconut oil's moisturizing properties and aromatherapy benefits. The project blends chemistry with skincare science, culminating in assignments analyzing reactions and cosmetic formulations.	
24	Life Process	STETOSCOPE AND LIFE PROCESS BOARD GAME	Explorer	Human Body	3	0	active	This hands-on module explores human organ functions through interactive experiments. Students build a stethoscope to study sound transmission in medical tools and design a lung tester to measure respiratory capacity using balloons or water displacement. Assignments evaluate comprehension of physiological systems and diagnostic principles, blending anatomy with practical engineering.	
24	Life Process	LUNG TESTER	Discoverer	Human Body	3	0	active	This educational game simulates how oxygen intake, blood circulation, and nutrient transport sustain body functions. Players engage in interactive challenges, managing efficient oxygen exchange and blood flow to maintain health. By making strategic decisions, they learn how these systems	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								interconnect while developing problem-solving skills to optimize bodily functions in a dynamic, immersive environment.	
25	Electrochemistry	CITRIC ACID CELL LEMON BATTERY ELECTROLYSIS ELECTROPLATING	Explorer	Chemistry	8	0	active	This interactive module teaches electrochemistry through a lemon battery experiment and electroplating demonstration. Also the experiments like House Hold battery and Electrolysis is taught. Participants explore metal/non-metal properties, electron transfer, and ion deposition while creating functional circuits. Assignments reinforce concepts of oxidation-reduction reactions and real-world applications in metal coating technologies.	
25	Electrochemistry	MAGIC SALT LAMP	Discoverer	Chemistry	8	0	active	This project introduces electricity fundamentals through a hands-on "Magic Lamp" experiment. Participants construct a simple circuit to learn about conductors, insulators, and electric light principles while discovering basic electrochemistry concepts. The activity demonstrates complete circuits, material conductivity, and energy conversion, with assignments reinforcing key STEM concepts through practical application and problem-solving.	
26	Magical Mixture	FUN WITH MIXTURES: LAVA LAMP SOLUBILITY FUN WITH LUSTER	Explorer	Chemistry	6	0	active	This interactive activity explores density, solubility, and chemical reactions through a DIY lava lamp experiment. Students observe how oil and water separate due to density, food coloring dissolves selectively, and citric acid reacts to create bubbling motion. The hands-on project reinforces STEM concepts while engaging learners in a visually captivating demonstration of key scientific principles.	
26	Magical Mixture	FUN WITH DENSITY	Discoverer	Chemistry	6	0	active		
27	pH science	ELECTROLYSIS AND TURMERIC PAINTING	Explorer	Chemistry	10	0	active	Turmeric changes color with liquids because it acts as a natural indicator! The yellow color you see in turmeric powder comes from a special chemical inside it called curcumin. This curcumin molecule has a unique structure that changes its shape (and therefore its	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								color) when it comes into contact with a base (an alkaline substance). It stays yellow in acids and neutral liquids, but when a base touches it, it transforms into a reddish-brown color!	
27	pH science	FUN WITH AMMONIA AND NEUTRALIZATION	Discoverer	Chemistry	10	0	active	This hands-on experiment teaches core scientific concepts through creating lava lamps. Students discover density by layering oil and water, observe solubility as food coloring mixes only with water, and witness acid-base reactions when citric acid generates colorful bubbling movement. The engaging activity makes chemistry principles tangible while developing observation and critical thinking skills	
28	Slimy World	SLIME	Explorer	Material Science (Chemistry)	4	0	active	This workshop introduces slime-making to explore material properties and transformations. Participants learn slime composition, create their own, and observe material changes through paper folding. Hands-on activities demonstrate chemical interactions and physical transformations, while assignments assess comprehension of these scientific principles in an engaging, interactive way.	
28	Slimy World	SELF INFLATING PUPPET SUPER BALLOON	Discoverer	Material Science (Chemistry)	4	0	active	This interactive module explores material properties through slime-making and origami experiments. Participants create custom slime to study non-Newtonian fluids, then fold origami to observe structural transformations. Assignments evaluate comprehension of polymer chains and material behaviour changes, blending chemistry with engineering in an engaging, tactile way.	
29	Be a Pyrochemist	SCIENCE OF COMBUSTION: DESIGN A FIRE EXTINGUISHER SIZZLING SCRIPT COLORFUL FLAME FIREPROOF KETTLE	Explorer	Chemistry	8	0	active	This interactive module explores chemical changes through exciting experiments like fire writing and flame tests. Students identify reaction clues (color change, gas production) and test acids/bases while discovering how elements create colorful flames. Assignments reinforce concepts of chemical properties and reaction types through practical analysis.	
29	Be a Pyrochemist	EXPLORE GASES: POWER	Discoverer	Chemistry	8	0	active		

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
		OF OXYGEN BURNING HYDROGEN FUN WITH CO2							
30	Why things react	SHACKY BOTTLE COPPER TREE CHAMELEON CHEMISTRY	Explorer	Chemistry	9	0	active	This module brings chemistry to life with three engaging experiments: Shaky Bottle demonstrates gas-producing reactions Magic Writing reveals invisible ink chemistry Copper Tree showcases beautiful metal displacement Students observe reaction principles firsthand, then solidify understanding through assignments analyzing chemical changes and reaction rates.	
30	Why things react	ION CARD GAME	Discoverer	Chemistry	9	0	active	This hands-on module demonstrates chemical reactions through three captivating experiments. Students observe gas production in a shaky bottle, invisible ink reactions with sodium thiosulfate, and copper crystal growth via displacement. Assignments analyze reaction rates, evidence of change, and metal reactivity trends—making chemistry tangible and exciting.	
31	Sailing Science	SAIL AND PEDDLE BOAT	Explorer	Earth Science	1	0	active	This interactive module explores wind propulsion through sailboat design and experimentation. Participants discover how sails convert wind energy into motion, study airflow dynamics, and apply concepts to solve practical challenges in a workbook. Assignments evaluate comprehension of aerodynamics and force transformation in marine environments.	
31	Sailing Science	BALLOON POWERED BOAT	Discoverer	Earth Science	1	0	active	This project introduces students to fundamental principles of wind energy, forces, and motion through the design and construction of a balloon-powered boat. Students will explore how air pressure (from the balloon) creates thrust, propelling the boat forward, while learning about Newton's Third Law (action-reaction) and aerodynamics. The activity integrates hands-on engineering with physics concepts like force, friction, and energy	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								conversion, demonstrating how wind can be harnessed for movement.	
32	Balancing Science	BALANCING DOLPHINS	Explorer	Physics	2	0	active	This experiment shows how objects stay balanced. By adding small weights to a paper fish, we change how its weight is spread out, making it easier to balance. The weights help move the center of mass to a better spot, allowing the fish to stay steady the axle of the wheels.	
32	Balancing Science	BALANCING TOYS	Discoverer	Physics	2	0	active	It's a simple way to understand stability and how shifting weight affects balance. This makes learning physics fun and easy!	
33	Festive Science	LED DIYA AND ELECTRONIC CANDLE	Explorer	Tech	2	0	active	Explore the magic of light with the Electronic Candle STEM kit! Using a simple setup of an LED and a cell, create your own electronic candle. Turn the switch, and watch the LED glow like a real candle flame. This hands-on activity for students introduces the basics of electronics and adds a spark of excitement to learning!	
33	Festive Science	FANOOS LAMP	Discoverer	Tech	2	0	active	Discover the magic of light with the Electronic Candle STEM kit! Using a simple setup of an LED and a cell, create your own electronic candle. Turn the switch, and watch the LED glow like a real candle flame. This hands-on activity for students introduces the basics of electronics and adds a spark of excitement to learning!	
34	The Light Architect	LED FAIRY LIGHTS DIWALI LANTERN	Explorer	Tech	3	0	active	This activity introduces learners to the fundamental concepts of electricity through a hands-on project: Constructing a simple lantern using an LED, button cell, paperclip, and aluminum foil. By assembling and testing a closed circuit, participants explore how electrical energy flows, distinguish between conductors and insulators, and understand essential safety precautions when working with electricity. The interactive nature of this experiment encourages practical learning, reinforcing the significance of circuits in daily life while fostering curiosity about electrical applications.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
34	The Light Arhitect	FLICKERING FRAME	Discoverer	Tech	3	0	active	Create a DIY flickering photo frame using a picture frame, a simple series of 8 LEDs, and a cell. As you build, explore how lighting affects ambience and décor, and how thoughtful illumination enhances different housing types and living spaces. project blends creativity, science, and design to deepen understanding of light's role in our lives.	
35	Be an Audiologist	AIRHORN WHISTLE DESIGN A TIK TOK	Explorer	Physics	4	0	active	This module explores sound—how it's produced (vibrations), travels (waves), and behaves (pitch, volume). Participants will experiment with everyday objects to create sound, investigate whistles, and test their knowledge through quizzes and assignments.	
35	Be an Audiologist	CUCKOO WHISTLE OBOE CANDY WHISTLE	Discoverer	Physics	4	0	active	Explore the basic parameters of sound and how humans perceive it. Learn about sound properties through hands-on construction. Understand concepts like pitch, frequency, and vibration. Apply theoretical knowledge in a practical context and assess comprehension through engaging assignments that reinforce auditory science fundamentals.	
36	Detective Science	FINGERPRINT KIT	Explorer	Human Body	4	0	active	Explore spy techniques and scientific methods in fingerprint analysis through a DIY fingerprinting kit. Learn to collect, test, and analyze fingerprints, identifying unique ridge patterns. Understand fingerprint properties and their forensic importance. Apply knowledge in an investigative assignment to evaluate comprehension and practical skills in crime-solving scenarios.	
36	Detective Science	PERISCOPE	Discoverer	Physics	4	0	active	This workshop explores reflection—its types (regular, diffuse) and laws (angle of incidence = angle of reflection). Participants will discover real-world uses (mirrors, telescopes) and build a periscope to apply concepts hands-on. Assignments reinforce learning, linking theory to practical optics.	
37	Safety Circuits	SECRET CANDY BOX	Explorer	Tech	4	0	active	The Secret candy Box is a special box designed to keep treasures safe using	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
a clever mechanism. It stays locked until the hidden limit switch is pressed the right way. Once opened, a beeping sound plays, acting as an alarm to warn the owner if someone is trying to take their treasure! This project introduces students to basic electronics and mechanical systems in a fun and interactive way. By working on this project, students learn about switches, circuits, and alarms, helping them understand real-world applications of technology. It encourages creativity, problem-solving, and hands-on learning, making technical concepts engaging and access.									
37	Safety Circuits	SLIDE CIRCUIT	Discoverer	Tech	4	0	active	The Slide Circuit Box is an introduction to Interactive Electronics. In this project, you will build a circuit where the switch isn't a button—it's the box itself! By sliding one part of the box into the other, you bring two hidden pieces of metal together, allowing electricity to travel from the battery to the light. The core scientific themes include Conductive Paths, Contact Points, and Mechanical Switches. You will learn how to hide a circuit inside a structure so that the act of "assembling" or "closing" the box completes the loop. This is the same logic used in sliding phone cases or light-up jewelry boxes!	
38	Be an Orthopedist	HAND STEADINESS CIRCUIT (BUZZ WIRE)	Explorer	Biology	6	0	active	Discover the basics of electricity and how it flows through different materials. Engage in a hands-on activity by building a Buzz Wire model to explore electrical circuits. Understand its real-world application in testing eye-hand coordination. Consolidate learning through an evaluative assignment to assess conceptual understanding and practical skills.	
38	Be an Orthopedist	FAKE XRAY	Discoverer	Biology	6	0	active	In this experiment, we learn how X-rays show the inside of objects safely. We use a torch, a transparent sheet, and some objects like cardboard cutouts or coins. When the torch shines from behind, the objects make shadows that look like X-ray images. Dark areas	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								show where light is blocked, and bright areas show where light passes through. This experiment helps us understand how X-rays work without using real radiation.	
39	Fan-tastic Science	EXHAUST FAN	Explorer	Earth Science	5	0	active	Explore the role of exhaust fans in enhancing air quality and ventilation. Understand the science of airflow and air pressure behind their operation. Identify applications in different settings and examine design variations. Build and test a DIY exhaust fan, analyze its performance, and document findings through a practical assignment.	
39	Fan-tastic Science	COLOR SPLASH	Discoverer	Earth Science	5	0	active		
40	Science: Magic or Logic	DESIGN GHOST SCOPE	Explorer	Human Body	5	0	active	This engaging workshop revisits key concepts of optical illusions through hands-on activities, culminating in the construction and exploration of a Ghost Scope—a simple device that demonstrates how our eyes and brain interpret visual tricks.	
40	Science: Magic or Logic	AMES ROOM	Discoverer	Human Body	5	0	active	Reinforce prior knowledge of optical illusions and introduce the concept of the Ames Room. Understand how distorted perspectives create visual illusions and explore the science behind its design. Engage in building a model Ames Room and discover its real-life applications, deepening understanding through hands-on experience and visual perception analysis.	
41	Work and Energy	SIEGE CATAPULT	Explorer	Physics	5	0	active	Understand the concept of force and its various types through interactive learning. Explore the fundamentals of simple machines and the three classes of levers. Apply these principles by examining the working mechanism of a catapult. Enhance learning by building a functional catapult model to reinforce theoretical concepts through hands-on experience.	
41	Work and Energy	FUN WITH RUBBER BAND POWERED BOW	Discoverer	Physics	5	0	active	This module introduces participants to the fundamental concepts of force through interactive learning. They'll explore push/pull actions, discover how forces affect motion and shape, and	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								learn about different force types (contact/non-contact). The hands-on Rubber band bow project demonstrates practical applications, helping them understand force transfer and projectile motion while developing problem-solving skills in an engaging way.	
42	Animal Kingdom	ELECTRICAL QUIZ BOARD	Explorer	Ecology Environment	5	0	active	Learn the fundamentals of Printed Circuit Boards (PCBs) and the conductive properties of metals. Explore basic electric circuit concepts through a hands-on project—building an Electric Quiz Board. Reinforce understanding of circuitry and conductivity with practical application, followed by assignments to assess comprehension and problem-solving skills.	
42	Animal Kingdom	LIFE CYCLE CARD GAME	Discoverer	Ecology Environment	5	0	active	This activity-based learning module helps students understand concepts through play and interaction, not rote learning. Visual tools and hands-on tasks make learning faster and more memorable. The Life Cycle Card Game simplifies complex processes into an engaging sequencing challenge. Students learn by doing, thinking, and correcting in real time. Simple, effective, and impactful.	
43	Magical Motions	AWESOME AUTOMATA	Explorer	Physics	6	0	active	Introduce participants to the concept of motion and its various types through engaging activities. Explore the principles behind Cam Toys (Automata Toys) to understand how motion can be converted and controlled. Apply these concepts by building a functional Automata Toy, reinforcing theoretical knowledge through hands-on learning and creativity.	
43	Magical Motions	DESIGN GEAR ACROBAT	Discoverer	Physics	6	0	active		
44	Be a Cartographer	MAPS	Explorer	Geography	6	0	active	This module explores geography and mapping, covering longitude, latitude, cartography, and GPS technology. Students learn how maps represent large areas and how ancient Indian scholars like Aryabhata and Jai Singh II contributed to navigation. A hands-on DIY activity will engage students in	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								creating personalized maps using coordinates and landmarks to refine spatial awareness. Through interactive tasks, students will link historical methods to modern applications, strengthening problem-solving skills.	
44	Be a Cartographer	INTERNATIONAL TIME DIAL – LATITUDE AND LONGITUDE	Discoverer	Geography	6	0	active	This module explores global time zones, focusing on Indian Standard Time (IST) and daylight saving. Participants will learn how Earth's rotation affects time differences and apply this by designing an International Time Dial.	
45	Air Powered Crafts	BALLOON POWERED CRAFTS	Explorer	Earth Science	1	0	active	Buckle up for a high-pressure adventure! The Balloon-Powered Crafts kit helps 4th-grade students explore motion, force, and energy through fun, hands-on activities. Using the energy stored in a balloon, students design and build a balloon car to learn about friction, create balloon rockets to understand action and reaction, and make DIY hovercrafts to explore air pressure and reduced friction. Acting as "Junior Engineers," they follow the Engineering Design Process—making predictions, testing ideas, and improving their designs—turning physics into an exciting, real-world learning experience.	
45	Air Powered Crafts	WIND TOYS	Discoverer	Earth Science	1	0	active	Unleash the power of the atmosphere! The Design a Blow Car & Wind Wheel kit is an interactive exploration into how moving air—wind—can be harnessed to perform work. Part of the 25 Discovery series, this kit transitions students from passive observers of weather to active engineers of wind-powered technology. Through two core builds, students will investigate the mechanics of wind energy: The Blow Car: Students design a lightweight vehicle equipped with a high-surface-area "sail." By using their own breath or a fan, they explore how the angle and size of a sail capture wind to create motion, experimenting with the variables of drag and thrust. The Wind Wheel: Taking inspiration from historical windmills and modern	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								turbines, students construct a rotating wheel that converts the linear path of wind into rotational energy. This project demonstrates how wind can be used to lift small weights or power simple mechanical systems. Following the Engineering Design Process, students will prototype, test, and "re-breeze" their designs. They will learn to troubleshoot common issues like high friction or unbalanced blades, ultimately discovering how clean, renewable energy can be a driving force for the future.	
46	Laws of Motion	NEWTON'S SUPERHERO	Explorer	Physics	9	0	active	This hands-on experiment transforms students into "force superheroes" as they explore levers and equilibrium using the Balanced/Unbalanced Lever Challenge.	
46	Laws of Motion	NEWTON'S CAR	Discoverer	Physics	9	0	active	This hands-on experiment transforms students into "force superheroes" as they explore levers and equilibrium using the Balanced/Unbalanced Lever Challenge.	
47	Electrical Circuits and Switches	DESIGN A TREASURE BOX	Explorer	Physics	7	0	active	Unlock the thrill of discovery with our Treasure Box Activity! Kids turn into mini-inventors as they create a secure treasure chest that only opens with the correct secret code or mechanism. It's a fun blend of imagination, problem-solving, and hands-on STEM learning — because every great scientist deserves a place to guard their treasures!	
47	Electrical Circuits and Switches	PLAY WITH SWITCH/ELECTRONIC PHOTOFRAME	Discoverer	Physics	7	0	active	In this hands-on activity, you'll explore how a limit switch controls a circuit. By connecting a limit switch to a battery, buzzer, and wires, you can experiment with turning the circuit ON or OFF. Press the switch to break or complete the circuit, and observe how the buzzer or LED reacts. This activity helps you understand how limit switches are used to start, stop, or change the behavior of machines, making them smarter and safer. You'll also learn how pressing and releasing the switch can either open or close the circuit, just like real-life devices.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
48	Intensity of Light	DESIGN A BED LAMP	Explorer	Physics	8	0	active	This hands-on kit empowers users to build their own personalized bed lamp while learning basic electronics and design. The project covers circuit assembly (wiring, switches, LEDs), material creativity (decorative shades, bases), and practical lighting principles. Participants will explore series vs. parallel circuits, energy efficiency, and ambient lighting design—all with safe, low-voltage components. Perfect for budding engineers and artists alike, the kit blends STEM skills with cozy functionality.	
48	Intensity of Light	ALIEN LAMP	Discoverer	Physics	8	0	active	The Alien Lamp is an innovative, interactive lighting kit designed to blend playful extraterrestrial aesthetics with hands-on STEM learning. Inspired by bioluminescent alien flora, this DIY lamp features customizable, soft-glowing "tentacles" made from flexible, color-changing LEDs	
49	Light Sensor	DARKNESS DETECTING PUPPET	Explorer	Physics	9	0	active	The Darkness Detecting Puppet is a project in Inverse Logic Engineering. While most sensors are designed to turn "ON" when they receive a signal, this circuit uses a NPN Transistor configuration to trigger an output when a signal (light) is removed. This is the same technology used in "smart" nightlights that glow only when the room lights are turned off. The core scientific themes involve Voltage Division and Biasing a Transistor. You will use an LDR as a gatekeeper. By integrating a Potentiometer, you will gain the ability to "tune" your puppet, deciding exactly how dark it needs to be before its LED eyes glow or its buzzer voice speaks.	
49	Light Sensor	GOOD MORNING ALARM	Discoverer	Physics	9	0	active	The Good Morning Alarm is an automated system designed to introduce you to the world of Optoelectronics and Transducers. In this module, you will build a device that monitors ambient light levels and triggers an audible signal once a specific brightness threshold is met. This mimics the real-world sensors used in streetlights and high-tech	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								security systems.	
								The core scientific themes involve the Photoelectric Effect and Resistance Modulation. You will specifically work with a Light Dependent Resistor (LDR), which acts as the "eyes" of your circuit. By integrating this sensor with a buzzer and a power source, you will create a functional "Light-to-Sound" energy converter.	
50	Modern Agriculture	DRIP WATERING SYSTEM	Explorer	Biology	8	0	active	The Drip Irrigation System Kit is designed to provide an efficient, sustainable, and cost-effective method of watering plants. By delivering water directly to the roots in controlled amounts, this system minimizes wastage, conserves resources, and enhances crop yield. The kit is easy to assemble, adaptable to different soil types and crop patterns, and promotes environmentally responsible farming practices. It serves as a practical tool for farmers, gardeners, and researchers seeking to optimize water usage while ensuring healthy plant growth.	
50	Modern Agriculture	HYDROPONICS	Discoverer	Biology	8	0	active	Hydroponics is a method of growing plants without soil. Instead of getting nutrients from dirt, plants grow in water mixed with minerals that they need to stay healthy. This activity helps you to grow your own plant using the hydroponics.	
51	Sound and Its Properties	SHEHNAI DESIGN	Explorer	Physics	8	0	active	Design a Shehnai activity explores how musical instruments create sound through vibrations. Students will learn how frequency, amplitude, and different instrument parts affect pitch and loudness. Using the shehnai, the activity also shows how air, flaps, and funnels produce musical notes. Through this, students will connect music with science and understand how sound travels and changes.	
51	Sound and Its Properties	FLAP WHISTLE BALLOON BLOWER PITCH WHISTLE	Discoverer	Physics	8	0	active	In these activities, students explore how sound is made using simple materials like a flap, acrylic tube, and balloon.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								By blowing air into the instruments, they see how vibration creates sound waves. These experiments help students understand pitch, loudness, and how wind instruments actually work.	
52	Stars and Constellations	CONSTELLATION LAMP	Explorer	Astronomy Space Science	8	0	active	The Constellation Lamp is a DIY kit that transforms a simple sphere into a captivating, luminous replica of the night sky. This project is ideal for both astronomy enthusiasts and craft lovers, offering a hands-on experience in building a functional piece of art. The kit includes a pre-punched globe with precise star patterns, an LED light base, a USB power cable, and a detailed instruction manual. Users will enjoy the rewarding process of assembling the lamp and seeing it cast beautiful stellar projections onto their walls and ceiling.	
52	Stars and Constellations	STAR MAPPING AND CONSTELLATIONS	Discoverer	Astronomy Space Science	8	0	active	The Star Mapping Kit is a hands-on project that allows users to create a personalized, illuminated map of the night sky from a specific date and location. This unique DIY kit combines the precision of astronomical data with the creativity of a craft project, resulting in a beautiful and meaningful keepsake.	
53	Science of Separation	FUN WITH CRYSTALLIZATION CRYSTALS OF UREA GOLDEN CRYSTALS	Explorer	Chemistry	9	0	active	Crystallization is a fundamental phase transition process with significant applications in materials science, chemistry, and engineering. Crystallization involves the formation of a solid crystal lattice from a solution, melt, or vapor, governed by nucleation and growth mechanisms. It is widely used in pharmaceutical purification, food processing, and semiconductor manufacturing. Understanding their principles enables precise control over material properties, purity, and morphology. Recent advances include computational modeling for process optimization and nanotechnology applications. This review discusses their mechanisms, influencing factors, and industrial relevance, highlighting emerging trends in sustainable and high-precision material processing.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
53	Science of Seperation	FUN WITH SUBLIMATION	Discoverer	Chemistry	9	0	active	Sublimation and evaporation are fundamental phase transition processes in materials science, chemistry, and engineering. Sublimation entails direct solid-to-gas conversion, while evaporation involves liquid-to-gas transformation, both driven by vapor pressure and temperature gradients. Applications include freeze-drying, solvent recovery, aerosol deposition, and nanotechnology-enabled purification. Cooling effects from evaporation influence solid formation kinetics, and temperature-dependent melting point shifts control material phase stability and morphology. Precise thermal management enables tailored structures, purity, and performance.	
54	Density and Buoyancy	DESIGN A NEWTON'S BOAT	Explorer	Physics	9	0	active	The Newton's Boat kit is a hands-on project that demonstrates a core principle of physics: Newton's Third Law of Motion. This fan-powered boat kit allows users to construct a simple yet effective vessel that glides across water by creating an equal and opposite reaction force. The kit includes a pre-cut boat body, a small DC motor, a propeller, a battery pack, and all necessary components for assembly. Through building and testing the boat, participants will observe how the fan pushes air backward, propelling the boat forward. This kit is a perfect educational tool for students and hobbyists to explore fundamental concepts of force, motion, and propulsion in a fun, engaging, and highly visual way.	
54	Density and Buoyancy	BUOYANT SCIENCE: PLAY WITH MAGIC DIVER ARCHIMEDES PRINCIPLE	Discoverer	Physics	9	0	active	Why does a ship float while a stone sinks? The answer lies in density and buoyancy. This kit lets students explore these concepts through simple hands-on activities. By testing floating and sinking, changing shape, and comparing mass and volume, students learn how density affects objects in fluids and how buoyant force helps objects float. The kit encourages observation, experimentation, and real-world connections in an engaging way.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
55	Fun with Gravity	GRAVITY LANTERN	Explorer	Physics	9	0	active	The Gravity Lantern is a mesmerizing toy that blends science and wonder, creating a captivating visual experience. Using magnetic levitation or balanced airflow technology, it suspends a softly glowing orb mid-air, defying gravity as it hovers and rotates. The gentle light shifts colors, casting a dreamy ambiance, while the seamless floating effect sparks curiosity and imagination. Perfect for both play and decoration, the Gravity Lantern transforms any space into a realm of magic, demonstrating physics in a way that delights all ages. A fusion of art and innovation, it's not just a toy—it's a floating spectacle.	
55	Fun with Gravity	TILT SWITCH DESIGN	Discoverer	Physics	9	0	active	This hands-on project demonstrates electrical circuits through a DIY gravity-controlled switch. Participants build a device that activates/deactivates via orientation changes, learning: Basic circuit completion Switching mechanisms Gravity's role in contact systems The activity combines physics with practical electronics, featuring prototyping challenges and assignments analyzing real-world applications in tilt sensors and safety cut-offs.	
56	Satellite Science	DESIGN A GEO STATIONARY SATELLITE	Explorer	Astronomy Space Science	9	0	active		
56	Satellite Science	DESIGN A SEXTANT SPIROGRAPH	Discoverer	Astronomy Space Science	9	0	active		
58	Push Pull Dynamics	SLING SHOT AND SLING PUCK	Explorer	Physics	1	0	active		
58	Push Pull Dynamics	MINI CATAPULT	Discoverer	Physics	1	0	active	This project introduces young learners to fundamental physics concepts through the construction of a balloon-powered slingshot and catapult. Students will explore elastic energy, forces (push/pull), and projectile motion by launching lightweight objects with their handmade toys. The activity demonstrates how stored energy in a	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								stretched balloon converts into kinetic energy to propel objects, linking to Newton's Laws of Motion. Through trial and error, children will investigate variables like balloon size, launch angle, and tension to optimize performance. The project fosters creativity, problem-solving, and an early understanding of energy transfer—all while having fun!	
59	Pet a plant	GROW YOUR PLANT	Explorer	Ecology Environment	1	0	active	In this DIY activity, sprout green gram and peanut seeds on damp tissue in plastic containers for seven days, measuring root and shoot growth. Transplant seedlings into pots, compare stem height, root length to illustrate water uptake and seedling growth.	
59	Pet a plant	CARD GAME	Discoverer	Ecology Environment	1	0	active		
60	Nutri Science	SAFE FUN EXPERIMENTS	Explorer	Human Body	1	0	active	Healthy eating activity, explains that healthy foods give our bodies energy to play and grow. Also using the colored foods like gems, get to know about the food colors used in junk foods.	
60	Nutri Science	PLAY WITH HEALTHY FOOD	Discoverer	Human Body	1	0	active		
61	Ocean of Air	DESIGN FLYING TOYS	Explorer	Earth Science	2	0	active	The Design Flying Toys Kit is an engaging and educational DIY kit that introduces users to the fundamental principles of flight through hands-on experimentation. This kit includes three distinct projects—a Parachute with Launcher, a Flying Saucer, and a collection of "Fun with Flying" activities—each designed to explore different aspects of aerodynamics. Users will build, test, and modify their own flying models, learning about concepts such as lift, drag, propulsion, and gravity in a fun and interactive way. The kit includes all the necessary components, from pre-cut materials to a detailed instruction guide, making it a perfect project for aspiring engineers, young scientists, and anyone curious about how things fly. The Design Flying Toys Kit provides a unique blend of creative building and scientific discovery, offering hours of rewarding and educational play.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
61	Ocean of Air	POP GUN PARACHUTE	Discoverer	Earth Science	2	0	active	The Pop Gun Parachute is an exciting and innovative DIY kit that combines the thrill of a classic toy with the principles of aerodynamics. This kit allows users to build a unique launching mechanism that uses compressed air to propel a parachute high into the air. Participants will assemble the "pop gun" launcher and the miniature parachute, learning about the physics of air pressure, projectile motion, and descent control as they experiment with their creation. The kit includes all components, from the air pump and launch tube to the lightweight parachute fabric and detailed instructions, ensuring a successful and educational building experience. The Pop Gun Parachute kit is perfect for young engineers and curious minds, offering a fun, hands-on way	
62	Play With Tops	ROTATION AND REVOLUTION OF EARTH	Explorer	Astronomy Space Science	2	0	active	In this module, we will explore the exciting world of motion and balance through a simple toy — the spinning top. You may think a top is just for play, but it actually shows us important science ideas happening right before our eyes. When a top spins, it is not just moving — it is demonstrating the concept of Rotation, balance, force, and friction. In this kit, you will investigate how objects rotate in one place, why spinning fast helps with balance, and what causes a top to wobble and fall. You will conduct hands-on experiments such as the Spin and Observe Test, the Surface Challenge, and the Spin Strength Investigation to discover what affects spinning time. You will also create your own improved spinning top design and test ways to make it spin longer and stay upright. By the end of these projects, you will begin to notice rotation everywhere — in fans, wheels, coins, and even playground rides — and understand the science behind how things spin and stay balanced.	
62	Play With Tops	SOLAR SYSTEM AND	Discoverer	Astronomy	2	0	active	Welcome to the Solar System and	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
		REVOLUTION		Space Science				Revolution Kit! In this module, we explore our cosmic neighborhood—a busy place where planets, moons, and stars are always on the move. You will learn that the Earth isn't just sitting still; it is actually a giant spaceship traveling at incredible speeds around a massive, glowing ball of fire called the Sun. We will focus on the core themes of Celestial Motion, Orbits, and Gravitational Pull.	
63	Sound Specialist	SOUND INSTRUMENTS	Explorer	EVS	1	0	active	Sound Toys is an innovative STEM kit that combines traditional acoustic instruments with electronic sensors to teach sound physics and engineering through play. This hands-on kit features three hybrid musical devices	
63	Sound Specialist	BUILD A BUGLE	Discoverer	EVS	1	0	active	The Toy Bugle Kit is an interactive STEM learning tool that combines musical creativity with hands-on acoustics experimentation. This DIY kit allows young scientists and musicians to assemble a functional bugle while discovering the physics of sound production in brass instruments.	
65	Be an ophthalmologist	3D VISION CRAFTS	Explorer	Physics	7	0	active	This project introduces students to the science of light and lenses by constructing a simple functional camera.	
65	Be an ophthalmologist	RGB REMIX	Discoverer	Physics	7	0	active	The Eye Spy Kit is an educational and engaging project designed to introduce young scientists to the concept of biological traits and environmental adaptations.	
66	Animal Food Habits	LIFE CYCLE CARD GAME	Explorer	Ecology Environment	1	0	active	This activity-based learning module helps students understand concepts through play and interaction, not rote learning. Visual tools and hands-on tasks make learning faster and more memorable. The Life Cycle Card Game simplifies complex processes into an engaging sequencing challenge. Students learn by doing, thinking, and correcting in real time. Simple, effective, and impactful.	
67	Unbalanced forces	360-DEGREE FAN	Explorer	Physics	7	0	active	The 360° Fun kit is an engaging STEM experiment that brings Newton's laws to life with a whimsical twist. This	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								hands-on fan demonstrates unbalanced forces and rotational motion in a mesmerizing way—all because one of its blades is intentionally trimmed!	
67	Unbalanced forces	FUN WITH AERODYNAMICS	Discoverer	Physics	7	0	active	We live at the bottom of an ocean of air, yet we rarely notice the heavy pressure pushing down on us. This kit uncovers the invisible laws of Aerodynamics and Fluid Dynamics. Through a series of high-energy experiments, Grade 7 students will investigate Bernoulli's Principle—the scientific rule that explains how 500-ton airplanes stay in the sky. Students will build a functional Atomizer to visualize pressure differentials, manipulate air streams to create a Hovering Ball trap, and engineer Flying Toys to master the four forces of flight. By controlling the speed of air, students will learn how to control the pressure of air, turning abstract physics into tangible levitation and spray power.	
68	Habitat Harmony	HUMAN EFFECT ON ENVIRONMENT BOARD GAME	Explorer	Ecology Environment	2	0	active		
69	Power up	HEXAWHEEL CAR	Explorer	Physics	9	0	active		
69	Power up	WORK AND ENERGY EXPERIMENTS	Discoverer	Physics	9	0	active		
73	Sound and Light	TABLE TOP BELL	Explorer	—	—	0	active		
73	Sound and Light	SOS LIGHT	Discoverer	—	—	0	active		
75	Seperation Science	SEPARATION SCIENCE	Explorer	Chemistry	9	0	active	The Separation Science Kit is a comprehensive dive into the physical and chemical properties of matter. In this module, you will learn that every substance has a "unique ID"—like its magnetism, its size, or its ability to dissolve. By using these IDs, you can pull a mixture apart into its original pieces. The core scientific themes include Solubility, Magnetism, and Coagulation. You will perform four distinct projects:	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								growing Borax crystals on shoelaces, testing the solubility of Citric Acid, using magnets to pull iron from sand, and using Potash Alum to "capture" mud particles in water. Each project demonstrates a different way to purify and separate substances.	
76	Be a Fashion Designe	TIE AND DYE KIT	Explorer	Chemistry	6	0	active		
76	Be a Fashion Designe	THREAD ART PAPER FASHION JUTE COASTER	Discoverer	Chemistry	6	0	active		
77	Be a Naval Architect	DESIGN A CATAMARAN	Explorer	Physics	6	0	active	The Dual-Hull Catamaran Kit challenges you to explore the relationship between Buoyancy, Hydrodynamics, and Structural Balance. By constructing a twin-hull vessel, you will learn how spreading a boat's weight across two points of contact with the water creates a more stable platform than a traditional monohull boat. The core scientific themes include Archimedes' Principle (the law of buoyancy) and Center of Mass. In this project, you will design the hulls, connect them with a crossbeam (the bridge), and test the vessel's "payload" capacity to see how much weight it can carry before the hulls submerge.	
77	Be a Naval Architect	DENSITY CRAFTS	Discoverer	Physics	6	0	active	The Centrifugal Pump Kit is a hands-on exploration of Hydrodynamics and the Conservation of Energy. In this module, you will construct a working pump using syringes and acrylic tubes to see how spinning motion can "throw" water outward, creating enough pressure to move it through a pipe. The core scientific themes include Centrifugal Force, Pressure Differentials, and Fluid Flow. You will use the 6ml and 2.5ml syringes as the pump casing and plunger, while the steel ball acts as a "check valve" to ensure water only moves in one direction. By the end of this project, you will understand how speed and pressure work together to fight gravity and move liquids upward.	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
80	Things around us	DESIGN A STRESS BALL OOBLECK BOUNCY BALL	Explorer	Material Science (Chemistry)	4	0	active	This kit explores the world of Materials Science, specifically focusing on the unique properties of Polymers and Plasticity. You will learn how the microscopic structure of a material determines how it behaves when we pull, poke, or stretch it. Through the "Skewer Through the Pouch" and "Stretch Test" projects, we will see how molecules can act like "molecular spaghetti," sliding past each other to create a seal or changing shape without snapping. Core Themes: Polymers, Plasticity, Elasticity, and Material Strength.	
80	Things around us	PLAY GHOST EGGS CLAP IN THE AIR	Discoverer	Material Science (Chemistry)	4	0	active		
81	Bublology	SNAKE BUBBLE BUBBLE ART	Explorer	Material Science (Chemistry)	5	0	active		
81	Bublology	BUILD YOUR OWN WAND	Discoverer	Material Science (Chemistry)	5	0	active		
83	Thermodynamics	BI METALLIC STRIP LAMP	Explorer	Chemistry	7	0	active		
83	Thermodynamics	POP-POP BOAT UNDER WATER VOLCANO	Discoverer	Chemistry	7	0	active		
85	Wizardy Circuits	WIZARD PEN STAND	Explorer	Tech	1	0	active	The LED Wizard Stand is a fun, hands-on STEM kit designed to teach basic electronics using a simple series LED circuit. Students connect multiple LEDs to create a glowing wizard-themed display, learning how current flows in a series. It's a magical way to introduce circuits, creativity, and science together.	
85	Wizardy Circuits	GLOWING GREETING CARD	Discoverer	Tech	1	0	active		
86	Be a Farmer	PLANTS WE EAT	Explorer	Ecology Environment	2	0	active	This project provides an educational framework for understanding plant biology through a hands-on "Grow Vegetables" kit. The core objective is to guide students through the fundamental stages of plant life, from seed to	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								harvest. Through five key learning goals, including identifying plant needs, mastering proper planting techniques, documenting growth, practicing consistent care, and successfully harvesting, students will gain practical experience and a foundational understanding of botanical principles. This initiative is designed to be engaging for children, fostering curiosity and a deeper appreciation for the natural world.	
86	Be a Farmer	GRASSY PUPPET	Explorer	Ecology Environment	2	0	active		
88	Traffic Inspector	DESIGN A TRAFFIC SIGNAL	Explorer	Social Science	2	0	active		
88	Traffic Inspector	DESIGA MAGNETIC CAR	Discoverer	Social Science	2	0	active		
91	Change is Inevitable	PHYSICAL & CHEMICAL CHANGE	Explorer	Chemistry	7	0	active	Welcome to the Magic of Transformation kit! In this module, Junior Scientists will explore the invisible world of molecular changes. By investigating how substances interact, change form, and sometimes create entirely new materials, students will learn to distinguish between the temporary shifts in physical appearance and the permanent transformations of chemical reactions. This kit focuses on the core scientific themes of Matter and Its Interactions, Properties of Substances, and Chemical Indicators. Through three hands-on projects—The Pink Reveal, The Disappearing Ink, and The Blue Precipitate—scientists will master the art of observation and data collection to prove whether a change has truly occurred at the molecular level.	
91	Change is Inevitable	INTRODUCTION TO ELEMENTS	Discoverer	Chemistry	7	0	active		
95	Chemical Reactions and Equations	CHEMICAL REACTIONS	Explorer	Chemistry	10	0	active	Chemistry is not just about color changes; it is about the transfer of energy and electrons. This kit explores two fundamental concepts of chemical reactions: Thermodynamics (Energy changes) and Redox (Reduction-Oxidation).	

Kit No.	Concept	Kit Name	Category	Subject	Grade	Stock	Status	Description	Packing Requirements
								In the first module, students will engineer their own "Hot Packs" and "Cold Packs." By dissolving specific salts in water, they will observe how breaking and forming chemical bonds can either release massive amounts of heat (Exothermic) or absorb energy to freeze water (Endothermic). In the second module, students will visualize the invisible movement of electrons. Using an iron nail and copper sulfate solution, they will witness a Single Displacement Reaction, identifying which elements are oxidized and which are reduced, providing a tangible look at the chemistry behind batteries and corrosion.	
95	Chemical Reactions and Equations	ATOMS AND ELEMENTS	Discoverer	Chemistry	10	0	active		
96	Acid, Bases and Salts	PH SPY: INDICATORS ART WITH INDICATORS NEUTRALIZATION	Explorer	Chemistry	7	0	active	This hands-on experiment teaches core scientific concepts through creating lava lamps. Students discover density by layering oil and water, observe solubility as food coloring mixes only with water, and witness acid-base reactions when citric acid generates colorful bubbling movement. The engaging activity makes chemistry principles tangible while developing observation and critical thinking skills	
96	Acid, Bases and Salts	INDICATORS: SOIL TEST ORGANIC INDICATORS	Discoverer	Chemistry	7	0	active		
—	Fun With Falling	GRAVITY CAR	Explorer	Astronomy Space Science	3	0	active		
—	Fun With Falling	ANTI GRAVITY OBJECT	Discoverer	Astronomy Space Science	3	0	active
