

Features of LMS

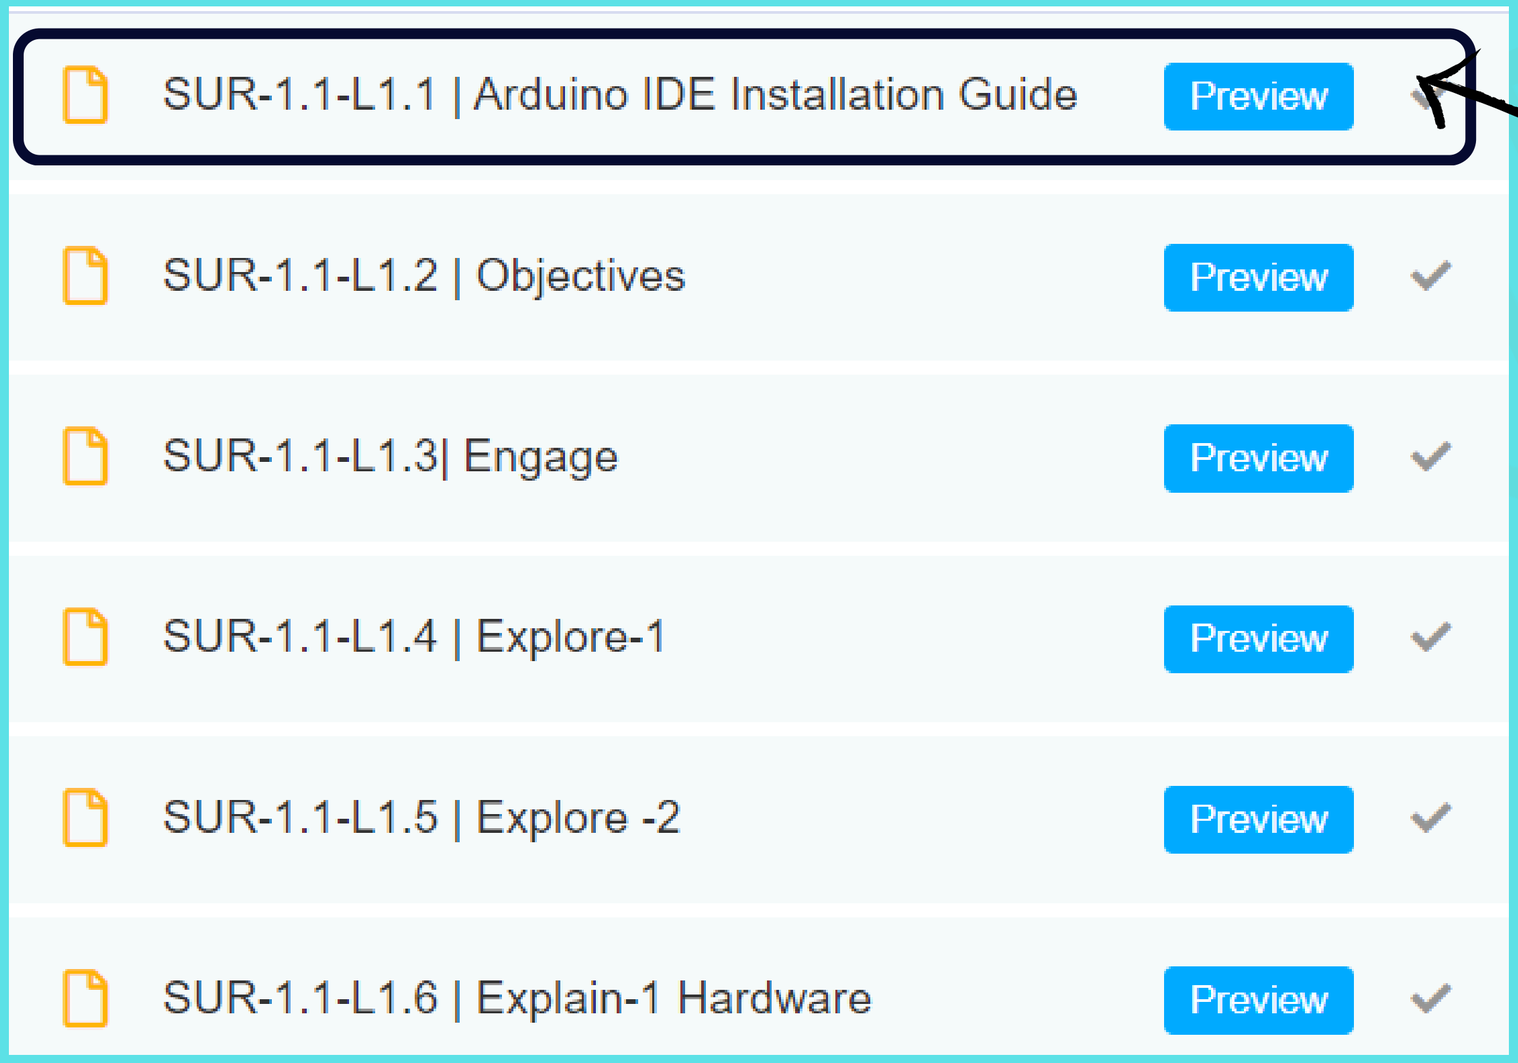

LMS sections

- Engage
- Explore
- Explain
- Elaborate
- Evaluate

Section 1: Arduino IDE Installation Guide

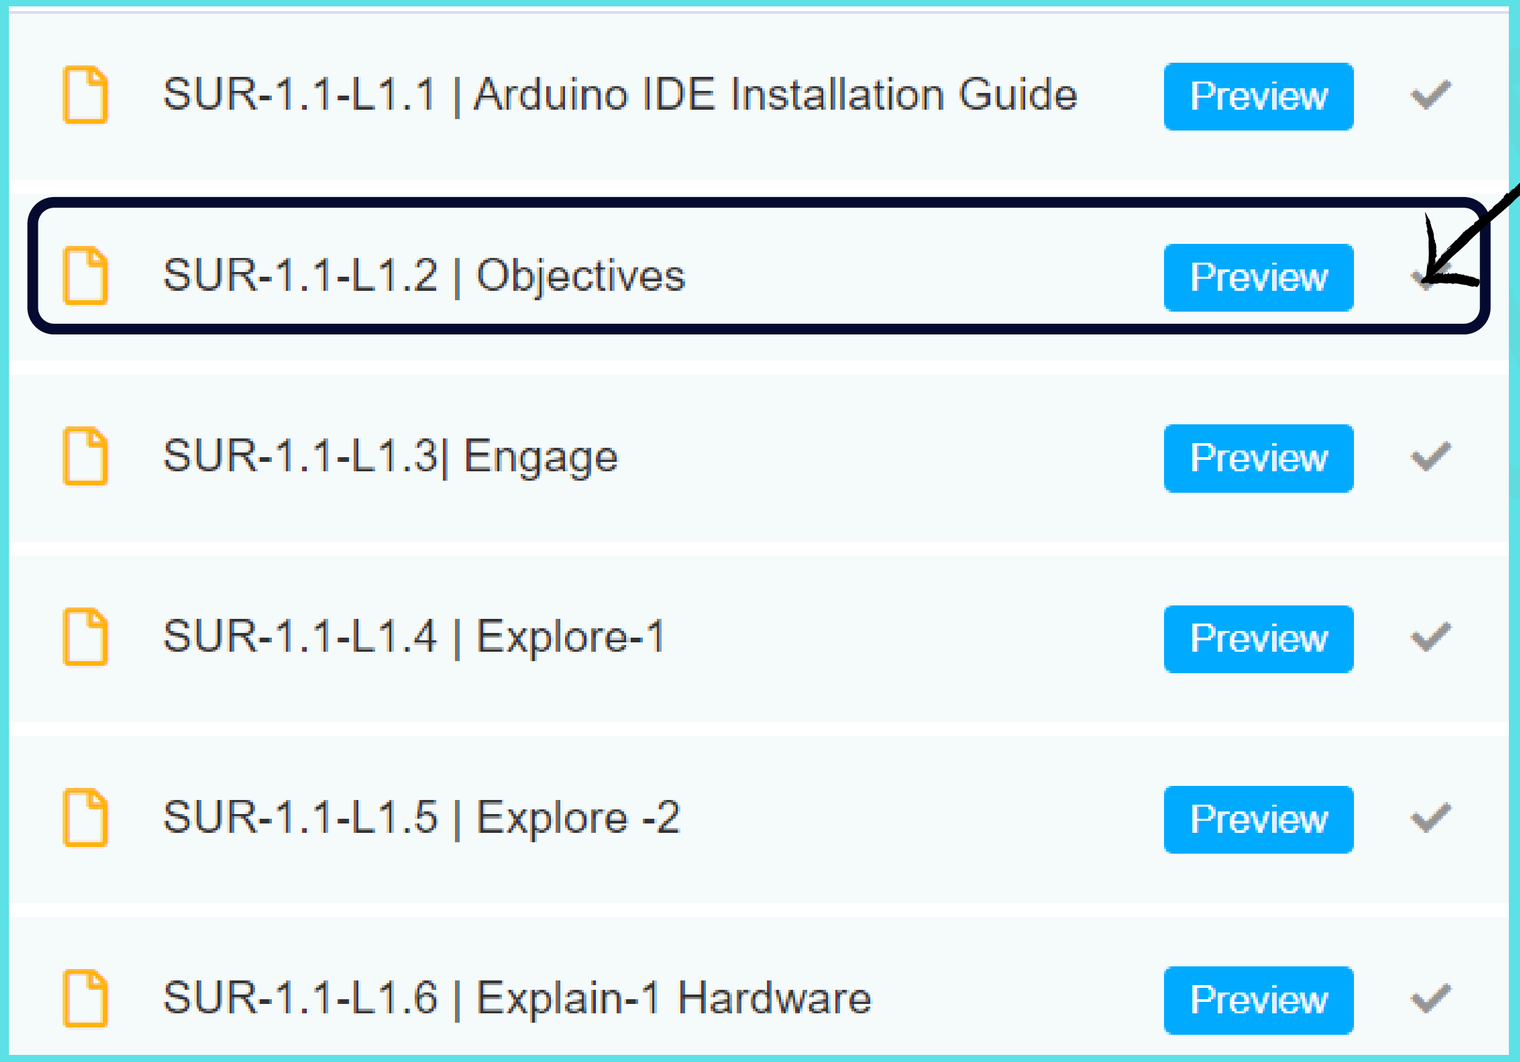

This section contains

- Information to download the Arduino IDE

Copyright by ScienceUtsav. All rights reserved

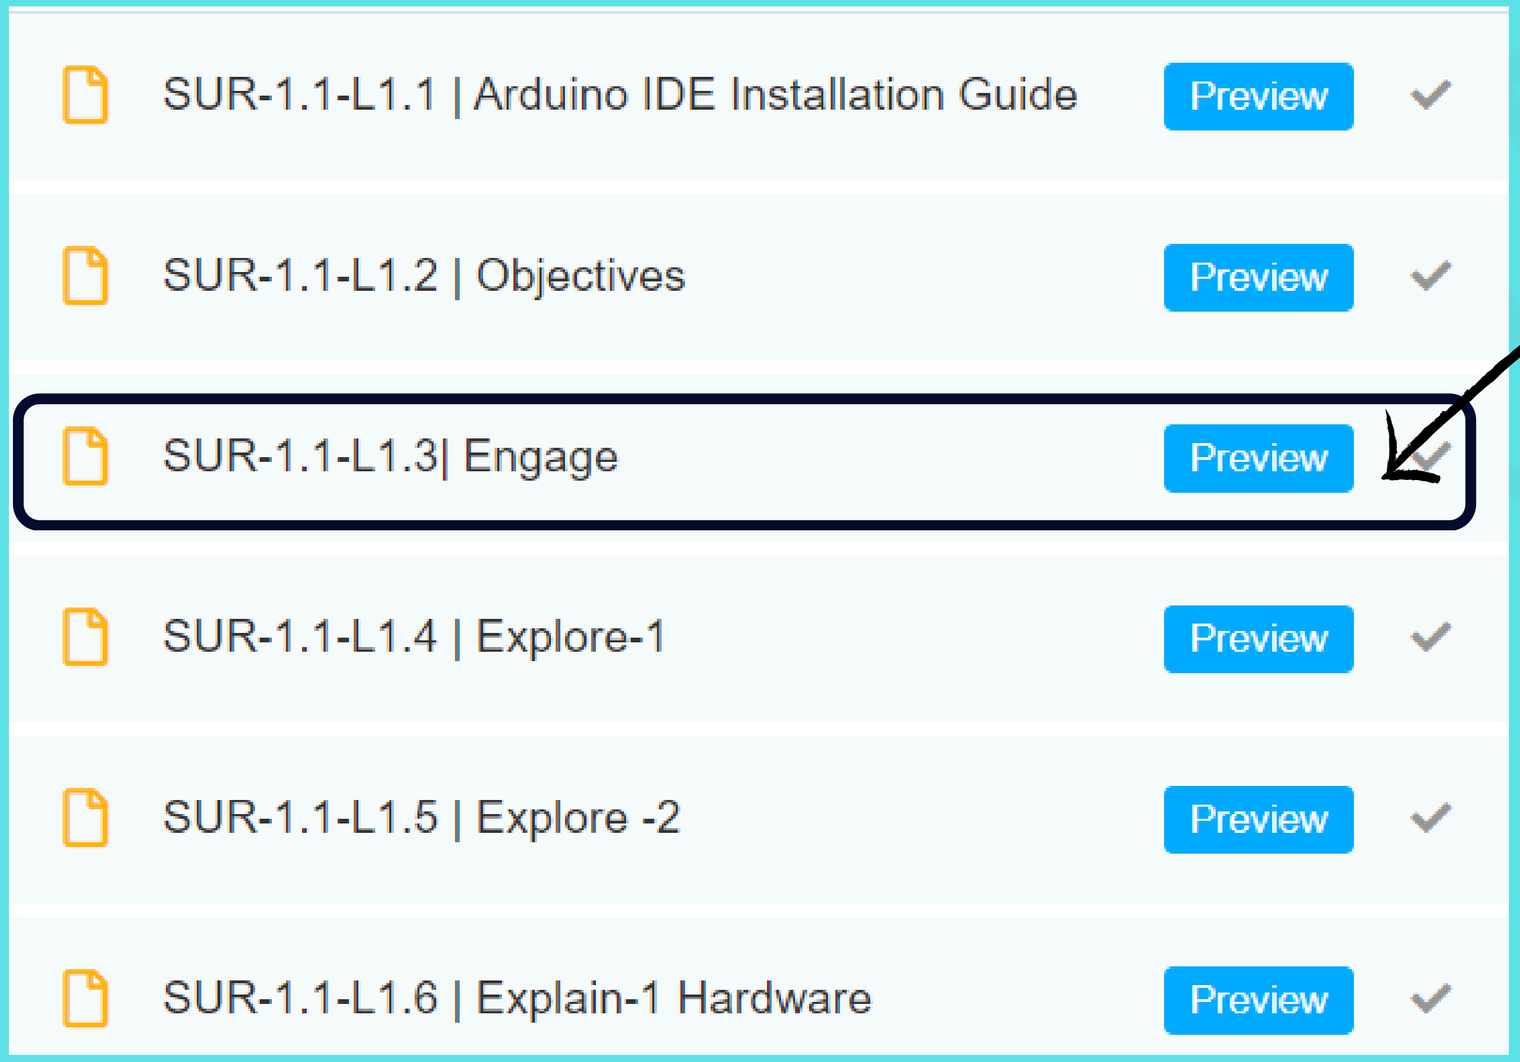

Section 2: Objectives

This section outlines the learning objectives for the module.

Section 3 : Engage

- **Engage** section poses thought-provoking questions for group discussions, promoting deeper classroom learning.
- Present these questions and allow a 5-minute discussion with students.

Section 4: Explore-1

- **Explore-1** segment includes **circuit connections** and **corresponding code** for functionality.
- Complete within a **45-minute** session.
- Capture photos of students during the session and share in the WhatsApp group.

Section 5: Explore-2

- **Explore-2** section explains the Explore-1 code.
- This should be done after students complete the circuit building.
- Includes a brief task to assess students' comprehension.

Section 6: Explain -1 Hardware

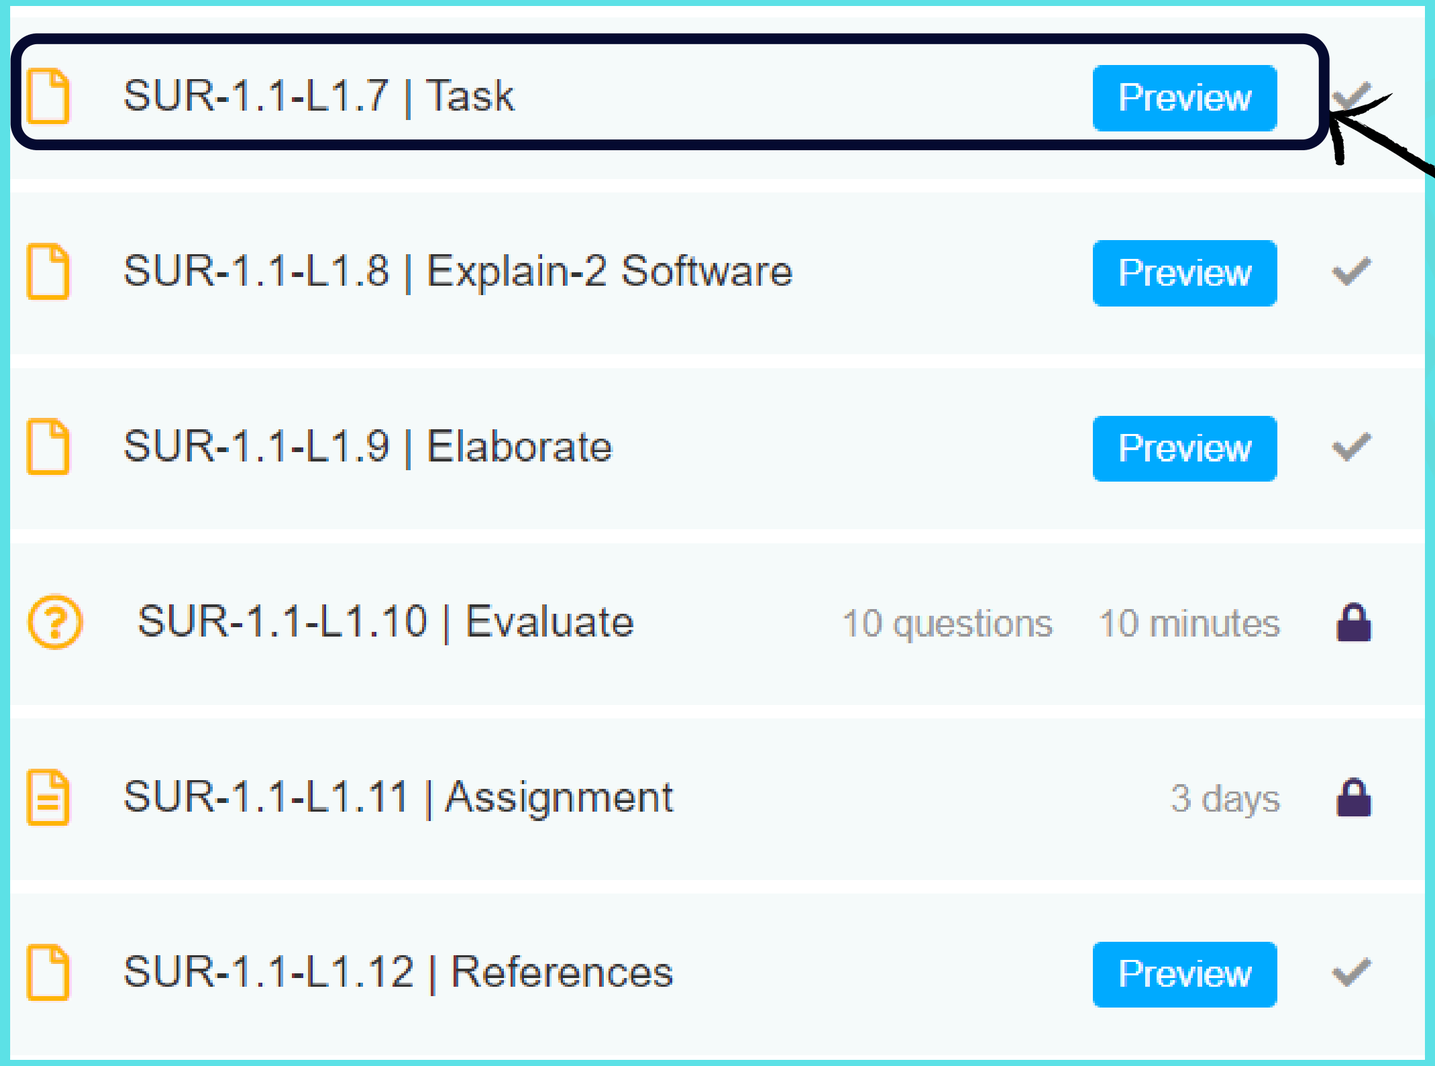

Explain -1 Hardware segment offers

- Provides an explanation of key terminologies related to sensors and output devices.
- Explains the Arduino microcontroller and its usage.
- Covers how to use sensors, output devices, and other hardware components.

Section 7: Task

In this part, students will find straightforward coding tasks to be completed as in-class assignments during the session.

Section 8: Explain - 2 Software

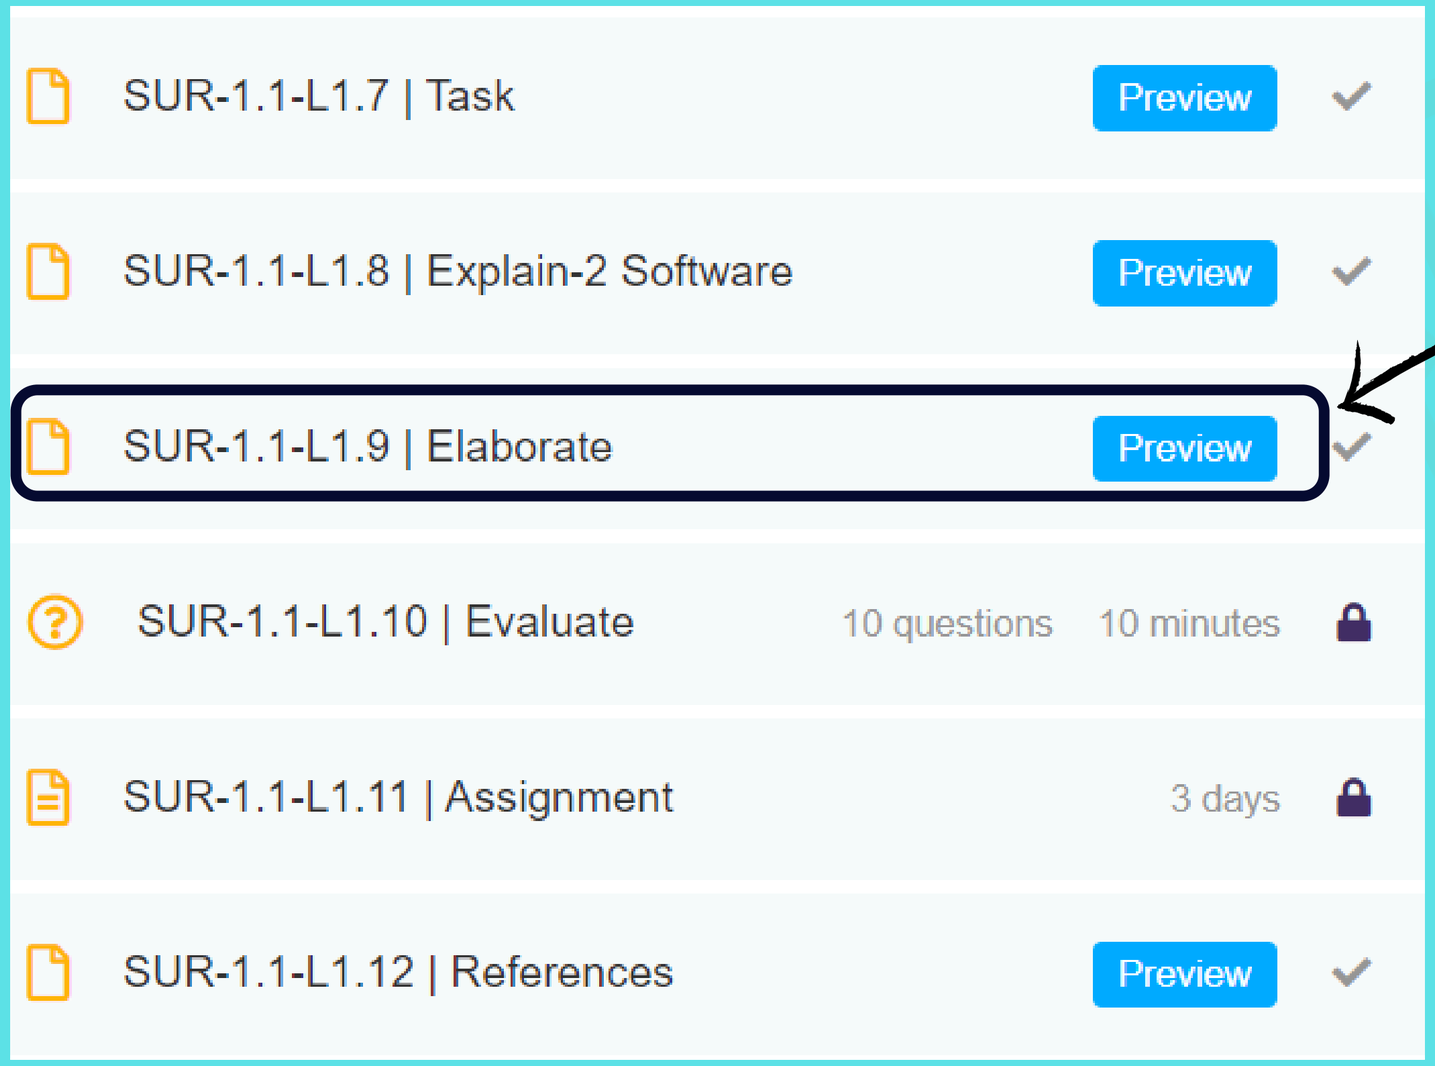

Explain- 2 Software section includes

- Covers the fundamental theory of Arduino programming
- Includes responses to assigned tasks
- Introduces new code statements and libraries

Copyright by ScienceUtsav. All rights reserved

Section 9: Elaborate

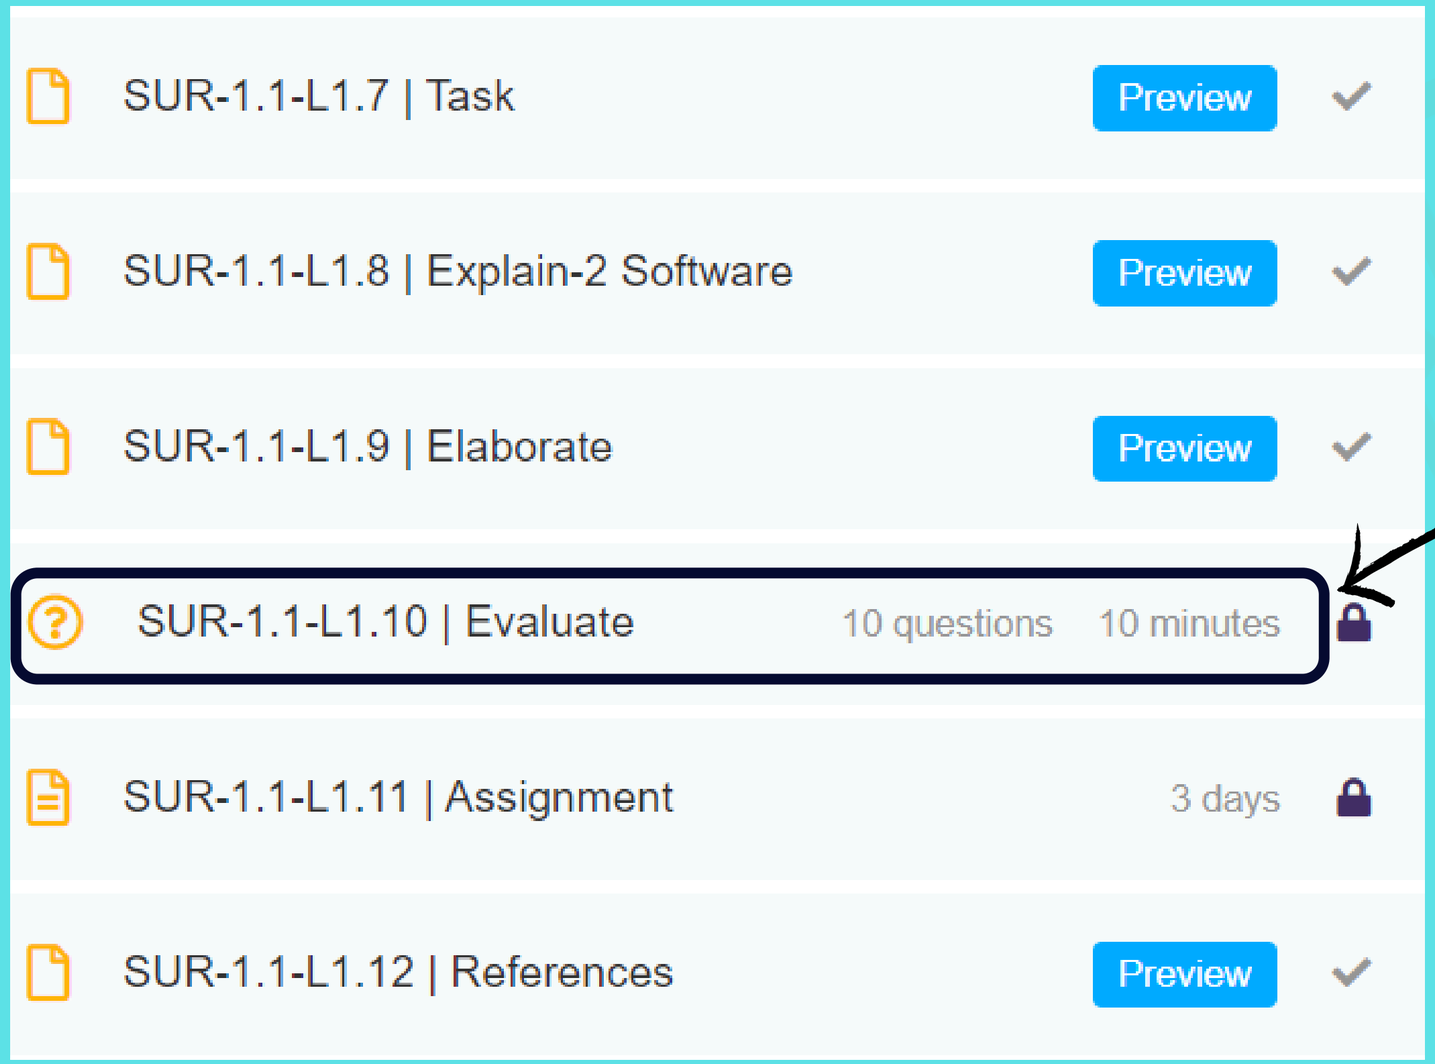

The **elaborate** section contains

- Includes structured, circuit-building project.
- Helps students understand real-world sensor and output component applications.
- Enables students to get ideas while building their own projects.
- This also has to be done in **45 minute** session

Section 10: Evaluate

The **Evaluate** section includes quiz questions designed to assess students' comprehension of the module

Copyright by ScienceUtsav. All rights reserved

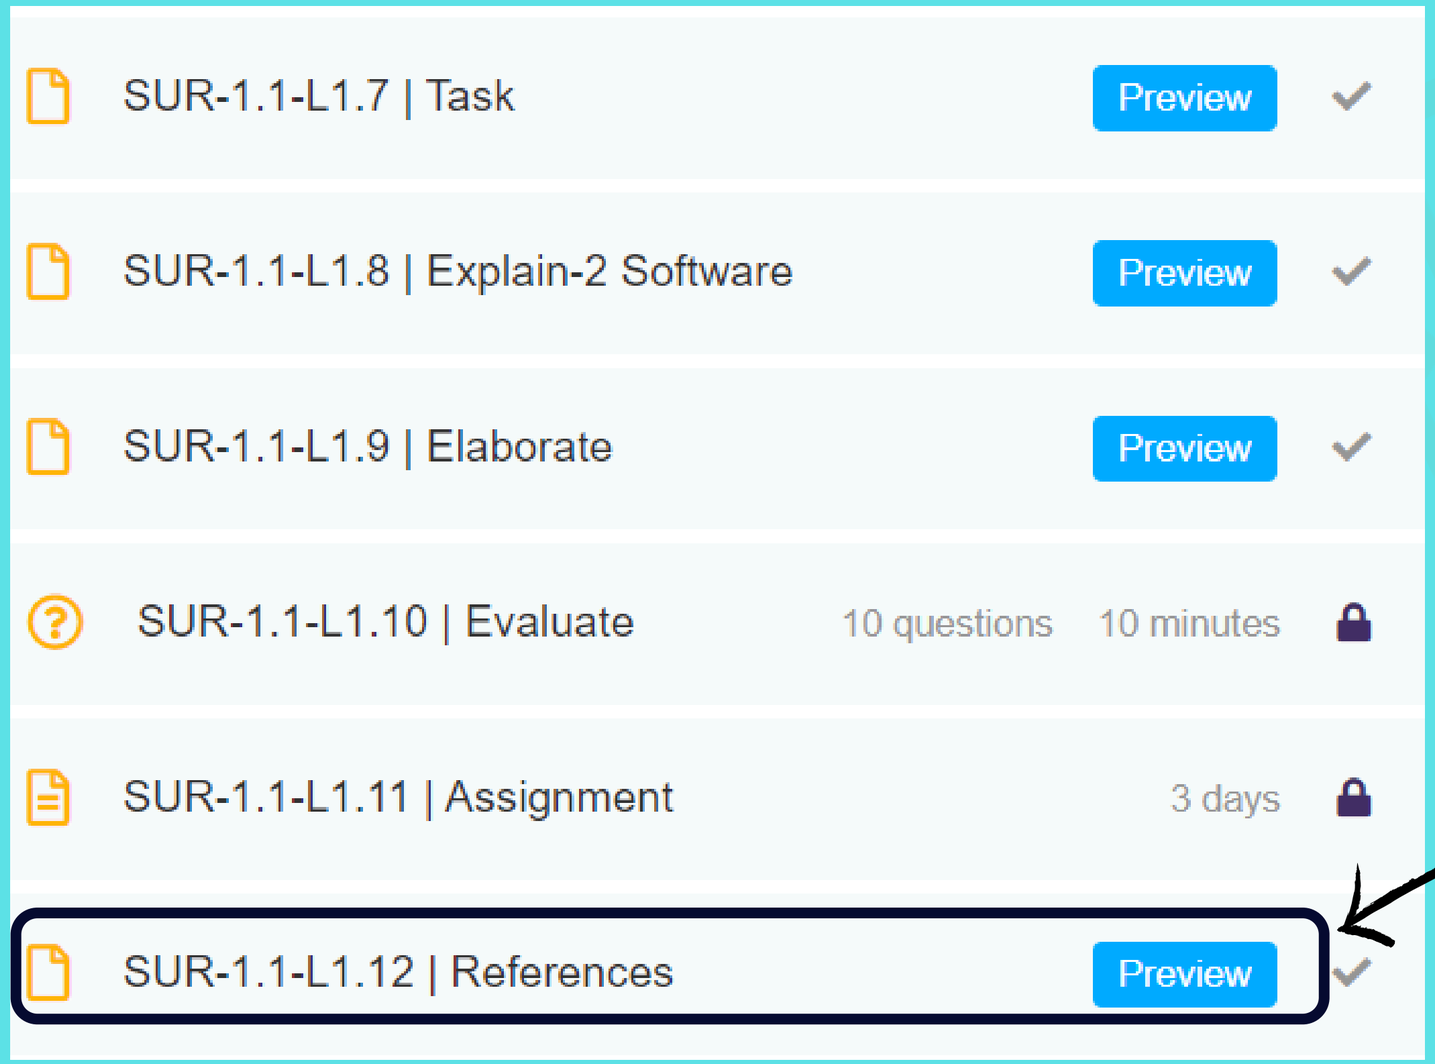

Section 11: Assignment

In this segment, additional questions are provided for students to solve as homework and submit their solutions in PDF format.

Section 12: References

Extra videos and information covering Arduino topics to enhance comprehension and engage students further.
